

L2 SIGNALS PRO

Founding Member Extension Policy

STATUS	PROGRAMME	APPLIES TO
Draft for review	L2 Signals Founding Members Programme	Eligible founding members only

01 Purpose

The Founding Member Extension Policy defines the conditions under which an eligible founding member may receive one additional month of L2 Signals subscription access.

The extension is designed to provide a defined service benefit based on the official performance of the L2 Signals signal engine during the applicable measurement period.

It is not a cash refund, reimbursement of personal trading losses, or guarantee of future profitability.

02 Eligibility

The extension is available exclusively to eligible participants in the L2 Signals Founding Members Programme.

The programme is limited to a maximum of 50 founding members.

To qualify for consideration, a member must have an eligible first paid subscription and comply with the applicable programme terms.

The extension may be granted only once per founding member.

It does not apply to subsequent paid subscription months.

03 Performance Measurement Period

L2 Signals measures official performance using calendar months.

Each measurement period begins at 00:00 on the first day of the calendar month and ends at 23:59:59 on the final day of that month, using West Africa Time (WAT, UTC+1).

Monthly net R resets to zero at the beginning of each new calendar month.

The official measurement period does not shift according to an individual member's subscription activation date, renewal date, or payment date.

A member who subscribes or pays partway through a month is therefore assessed against the official L2 Signals performance for the applicable calendar month, subject to the programme's eligibility rules.

The detailed calculation methodology is established in the L2 Signals Performance Measurement Policy.

04 Official Performance Determines Eligibility

Extension eligibility is determined exclusively by the official cumulative net R recorded by the L2 Signals signal engine for the applicable measurement period.

Members' personal trading account results are not used to determine eligibility.

This includes individual account balances, monetary profits and losses, personal net R, win rates, and execution outcomes.

The official calculation is independent of the founder's personal trading account.

This ensures that extension decisions follow the systematic signal engine's recorded outcomes rather than discretionary trading decisions or individual member experiences.

05 Eligibility Thresholds

Once the applicable monthly performance result has been finalised, the following rules apply:

OFFICIAL MONTHLY NET R	EXTENSION DECISION
Below 0R	**Eligible for one additional month**
Exactly 0R	**Eligible for one additional month**
Above 0R	**Not eligible**

A confirmed official net R of zero or below qualifies for the extension.

The extension is not determined by the number of winning or losing signals alone. It is determined by the final official net R calculation.

Examples

Example A: Negative performance

Official monthly net R: −3R.

Decision: The eligible founding member qualifies for one additional month of access.

Example B: Zero performance

Official monthly net R: 0R.

Decision: The eligible founding member qualifies for one additional month of access.

Example C: Positive performance

Official monthly net R: +2.5R.

Decision: The founding member does not qualify for the extension.

Example D: No eligible completed signals

Official monthly net R: 0R, provided no unresolved signals remain that could affect the calculation.

Decision: The eligible founding member qualifies for the extension.

06 Month-End Finalisation

The monthly performance calculation begins at the end of the final calendar day of the month.

Signals published during the measurement period that remain open at the cutoff will continue to be tracked under the signal engine's established rules until their outcomes are finalised.

The monthly result remains provisional while relevant signals are unresolved.

Extension eligibility will be confirmed only after the official monthly result has been finalised.

Signals are attributed to the calendar month in which they were officially published, based on their recorded publication timestamps. An outcome being finalised in the following month does not automatically transfer that signal to the following month's performance calculation.

This procedure prevents extension decisions from being based on incomplete monthly results.

07 Extension Benefit

An eligible founding member receives one additional month of access to the designated L2 Signals members-only service.

The extension:

- Provides additional subscription access without an additional subscription charge for that extension period.
- Does not constitute a cash refund.
- Does not reimburse personal trading losses.
- Does not guarantee that future signals will be profitable.
- Does not guarantee a minimum number of signals during the extension period.
- Does not create a recurring entitlement to additional free months.

The extension applies to L2 Signals service access only, subject to the programme's published terms.

08 Timing of the Extension

Eligibility is determined after the official monthly net R has been finalised.

L2 Signals will communicate the result to eligible founding members through its designated official communication channel.

The additional access period will begin after eligibility has been confirmed and the extension has been activated.

If month-end performance finalisation is delayed because signals remain unresolved, activation may also be delayed until the calculation is complete.

L2 Signals should communicate any material delay and the expected activation arrangements to affected members.

The extension's activation date and expiry date should be recorded in the subscription administration records.

09 Member Execution Responsibility

The extension is based on official L2 Signals performance, not on the individual outcomes members achieve in their own trading accounts.

Members are responsible for following the published entry conditions, stop-loss, take-profit, and subsequent official signal updates.

If a member changes a take-profit, widens or removes a stop-loss, enters at a different price, ignores a cancellation, or otherwise deviates from the published signal, the resulting personal outcome does not change the official signal result.

For example, if the signal engine records a signal reaching its official take-profit, a member who moved their personal take-profit further away cannot use that different outcome to alter the official net R calculation.

Likewise, a member's personal trading loss does not independently establish extension eligibility if the official monthly net R is positive.

This policy applies consistently to all eligible founding members.

10 No-Signal Periods

L2 Signals generates signals only when its predefined strategy conditions and market filters are satisfied.

The platform is not required to generate signals every day or to create trades merely to maintain activity.

If no eligible completed signals are recorded during the applicable month, the official net R is zero, provided no unresolved signals remain that could affect the calculation.

Under the eligibility thresholds in Section 5, zero net R qualifies an eligible founding member for the one-time extension.

11 No Cash Alternative

The extension is a service-access benefit and has no cash alternative.

A member who qualifies cannot request a cash payment in place of the additional access month.

The extension does not represent compensation for personal trading losses or an admission that a particular member's individual trading outcome should have matched the official signal outcome.

Any rights that cannot lawfully be excluded under applicable law remain unaffected.

12 Cancellation and Renewal

After the additional access month, the member may choose whether to renew the subscription at the applicable published price.

The extension does not automatically entitle the member to further free access periods.

If a member chooses not to renew, access may expire at the end of the extension period in accordance with the subscription terms.

Cancellation does not change the official performance calculation or the member's eligibility determination.

13 Records and Disputes

L2 Signals will maintain records supporting extension decisions, including:

- The applicable calendar-month measurement period.
- Official signal outcomes and R values.
- The final monthly net R calculation.
- The eligibility decision.
- The date the decision was communicated.
- The extension activation and expiry dates, where applicable.

A member who disputes an eligibility decision may request a review through the designated official L2 Signals contact channel.

The review will use the official signal records and the applicable published policies.

Any correction must be supported by the official records and applied consistently.

14 Relationship With Other Policies

This policy must be read alongside:

- The Founding Members Programme.
- The Subscription Terms & Conditions.
- The Performance Measurement Policy.
- The Signal Access & Delivery Policy.
- The Trading Risk Disclosure.

If the policies contain inconsistent provisions concerning extension eligibility or calculation, L2 Signals must resolve the inconsistency before relying on the affected provision.

15 Acknowledgement

Participation in the Founding Members Programme constitutes acknowledgement that:

1. The extension is conditional and available only once.
2. Official monthly net R determines eligibility.
3. A confirmed net R of zero or below qualifies an eligible founding member.
4. Individual trading account results do not determine eligibility.
5. The performance measurement cycle follows calendar months, regardless of individual payment timing.

6. The final monthly calculation may be delayed until outstanding signals have been resolved.
7. The extension provides additional service access rather than cash compensation.
8. Future signals and trading outcomes are not guaranteed.
