

L2 SIGNALS PRO

Signal Access & Delivery Policy

STATUS	MAX RISK PER SIGNAL	DAILY EXPIRY WINDOW
Draft for review	2% of account balance	21:00–21:50 UTC

01 Purpose

This policy explains how members receive, interpret, and execute L2 Signals, including order types, signal expiry, position sizing, risk management, and official signal updates.

L2 Signals provides structured trade setups generated by its systematic signal engine. Members are responsible for following the published instructions and managing their own trading accounts.

Losses are an inevitable part of trading. Historical or previously recorded performance does not guarantee future results.

02 Official Signal Delivery

L2 Signals distributes signals through its designated members-only communication channels.

Members are responsible for monitoring these channels and reviewing the complete instructions accompanying each signal before placing an order.

Depending on the setup, a signal card may contain:

- Instrument.
- Trade direction.
- Order type: Market or Limit.
- Entry price or entry conditions.
- Stop-loss (SL).
- Take-profit (TP).
- Recommended position size, where provided.
- Daily expiry information.
- Signal status and subsequent official updates.

Members should not assume that every signal contains identical fields. They must follow the specific instructions published for each setup.

Only signals and updates issued through designated official L2 Signals channels should be treated as authoritative.

03 Follow the Specified Order Type

Every signal specifies either a Market Order or a Limit Order.

Members must use the order type specified in the signal.

Market Order: An order intended to execute at the available market price. The final execution price may differ from the displayed price because of market conditions, spread, slippage, or execution delays.

Limit Order: An order placed at a specified price or under the platform’s prescribed limit-entry conditions. Execution is not guaranteed simply because the order has been placed.

Members must not arbitrarily change the published entry, stop-loss, or take-profit levels.

Entering at a different price or changing the specified order type may materially alter the trade's risk and reward profile. Any such deviation is the member's responsibility.

If the specified entry conditions cannot be followed, the member should skip the signal rather than force an entry.

04 Daily Signal Expiry

L2 Signals uses a daily expiry window of 21:00–21:50 UTC.

Members must follow the expiry instruction communicated for each signal.

The applicable expiry time must be interpreted in UTC. Members using local time should convert the stated time correctly.

Before the applicable expiry:

- Close open L2 Signals trades by the specified expiry time.
- Cancel unfilled pending orders associated with expired signals.
- Do not carry expired signals into the next trading day.
- Wait for a new valid setup before entering another trade based on L2 Signals.

An expired signal must not be treated as a valid instruction for a new entry on the following trading day.

Members are responsible for checking their positions and pending orders rather than assuming that they will close or cancel automatically.

If an official signal card specifies an exact expiry time within the stated window, that signal-specific instruction takes precedence.

05 Account Size and Execution Suitability

L2 Signals is designed with prop firm accounts and accounts with sufficient capital to accommodate the strategy's stop-loss distances in mind.

The following account-size guidance applies:

ACCOUNT BALANCE	GUIDANCE
Above US$1,000	Recommended for more comfortable execution, particularly on prop firm accounts.
US$500–US$1,000	Supported, provided recommended position sizing can be followed without exceeding the member's risk limit.
Below US$500	Consider a suitable cent account that supports smaller position sizes.

These are execution guidelines, not guarantees that a particular account is suitable for every signal.

Account size alone does not determine whether a trade is appropriate. Members must also consider stop-loss distance, available margin, broker contract specifications, leverage, minimum lot size, and their own risk tolerance.

Members must not increase risk simply because their account balance falls within a recommended range.

06 Maximum Recommended Risk Per Signal

Members must never risk more than 2% of their account balance on a single signal.

Position sizing must account for:

- Current account balance or the appropriate risk-calculation base.
- Entry price.
- Stop-loss distance.
- Instrument contract specifications.
- Broker minimum and maximum lot sizes.
- The monetary value of price movement.
- Relevant execution costs and potential slippage.

Any lot size displayed on a signal card is a recommendation. It is not a guarantee that the same size is appropriate for every member’s account.

Members must verify their actual potential loss before placing an order.

If the broker’s minimum position size would exceed the member’s 2% risk limit, the member must skip the trade.

Members should also account for existing exposure and any applicable prop firm risk restrictions. The 2% limit is a ceiling, not a target that must be used on every signal.

Following this limit does not eliminate the possibility of losses exceeding the intended amount under adverse execution conditions.

07 Stop-Loss and Take-Profit Discipline

Members must respect the stop-loss and take-profit levels published in each signal.

Members must never widen or remove a stop-loss to avoid accepting a loss.

Members should not arbitrarily move a take-profit further away in pursuit of additional profit.

Changing either level alters the trade’s risk profile and may produce a result different from the official signal outcome.

If a member chooses to manage a position differently, that decision and its consequences remain the member’s responsibility.

Where L2 Signals issues an official trade-management update, members should follow the updated instruction rather than relying on an earlier instruction that has been superseded.

08 Prop Firm Rules and Account Restrictions

Members trading through proprietary trading firms are responsible for ensuring that every trade complies with their firm's rules.

These may include:

- Daily loss limits.
- Maximum drawdown limits.
- Restrictions on lot size or total exposure.
- News-trading restrictions.
- Holding-period restrictions.
- Overnight or weekend position restrictions.
- Other account-specific trading conditions.

L2 Signals does not override a prop firm's rules.

A valid L2 Signals setup may still be unsuitable for a particular prop firm account if the firm's restrictions prohibit the trade.

Members must check their firm's requirements before execution and skip any signal that conflicts with those requirements.

Members remain responsible for any breach of their firm's rules arising from their trading activity.

09 Signal Updates, Cancellations, and Expiry

Members must monitor official L2 Signals channels for updates that affect an active or pending setup.

An official cancellation means the cancelled setup must no longer be treated as a valid instruction for a new entry.

Members must not continue acting on an outdated signal after an official cancellation or expiry.

Where an update changes an existing trade-management instruction, members should review the complete update and apply it as directed.

Members are responsible for checking whether pending orders and open positions still correspond to a valid signal.

10 Member Execution Responsibility

L2 Signals provides the setup. Members control execution and remain responsible for their accounts and risk management.

Individual results may differ from the official signal outcome because of:

- Different entry prices.
- Incorrect order types.
- Delayed or missed entries.
- Unfilled limit orders.
- Widened or removed stop-losses.
- Modified take-profit levels.
- Failure to close positions by expiry.
- Broker pricing, spread, slippage, or execution delays.
- Position sizing and leverage.
- Failure to follow official updates.
- Prop firm restrictions or account-specific limitations.

These differences do not change the official outcome recorded by the L2 Signals signal engine.

Members' personal trading account results are not used to calculate official L2 Signals net R or determine founding-member extension eligibility.

The official performance record is governed by the Performance Measurement Policy.

11 No Guarantee of Execution or Profit

A published signal does not guarantee that an order will be filled or that the trade will reach its take-profit.

Market conditions, liquidity, broker execution, price gaps, spread changes, and other factors may affect the actual result.

Members must assess their own circumstances before executing a signal.

L2 Signals does not guarantee a minimum number of signals, a particular win rate, or a profitable outcome.

12 Member Conduct and Access

Members must not redistribute members-only signals, share subscription access with unauthorised individuals, or misrepresent official signal instructions.

Members should direct questions about a signal's published parameters or official status to the designated L2 Signals communication channel.

Members must not assume that unofficial commentary, personal trading opinions, or third-party messages override an official signal card or subsequent official update.

13 Acknowledgement

By using L2 Signals, members acknowledge that:

1. They must follow the specified Market or Limit Order type.

2. They must respect the applicable daily expiry between 21:00 and 21:50 UTC.
3. They must close open positions and cancel pending orders associated with expired signals as instructed.
4. They must size positions according to their account, stop-loss distance, and broker specifications.
5. They must never risk more than 2% of their account balance on a single signal.
6. They must never widen or remove a stop-loss to avoid a loss.
7. They must comply with their own broker and prop firm rules.
8. They are responsible for their execution decisions and account management.
9. Their personal trading results do not determine official L2 Signals performance.
10. Trading involves risk, and previous performance does not guarantee future results.

Final reminder: L2 Signals provides the setup. Members control execution and remain responsible for their own accounts and risk management.

L2 SIGNALS — Trade the system. Respect the risk. Protect your capital.
