

L2 SIGNALS PRO

Trading Risk Disclosure

STATUS	EFFECTIVE DATE	APPLIES TO
Draft for review	To be confirmed before launch	All subscribers and founding members

01 Purpose of This Disclosure

L2 Signals provides structured trading signals generated by a systematic, rules-based signal engine. Each signal may include a trade direction, entry price, order type, stop-loss, take-profit, recommended position size, and other relevant instructions.

Trading financial markets involves substantial risk. This disclosure explains the principal risks associated with using L2 Signals and establishes what subscribers should understand before executing any signal.

By subscribing to or using L2 Signals, you acknowledge that you have read and understood this disclosure and agree to use the service in accordance with its published terms and policies.

This disclosure should be read alongside the L2 Signals Subscription Terms & Conditions, Signal Access & Delivery Policy, and Performance Measurement Policy.

02 Risk of Financial Loss

Trading instruments such as gold, forex pairs, indices, and other leveraged financial products can result in partial or total loss of trading capital.

You may lose money when executing an L2 Signals trade, even when the signal follows the strategy’s rules.

A stop-loss is a risk-management instruction, not an absolute guarantee of the exact exit price. Market gaps, volatility, slippage, liquidity conditions, broker execution, and other factors may cause a position to close at a different price from the intended stop-loss level.

You should only trade with money you can afford to lose without compromising essential living expenses, financial obligations, or other important commitments.

L2 Signals does not guarantee that your account will remain profitable or that your capital will be protected from losses.

03 Past Performance Does Not Guarantee Future Results

Historical backtests, forward tests, simulated results, and previously completed signals can help evaluate a strategy. However, they cannot establish with certainty how the strategy will perform in future market conditions.

Performance may change because of:

- Changes in market structure, volatility, liquidity, or price behaviour.
- Differences between historical data and live market feeds.
- Changes in spreads, commissions, swaps, and other trading costs.
- Differences between simulated and live execution.
- Strategy limitations or periods when market conditions no longer favour the system.
- Technical errors, data interruptions, or unforeseen market events.

Any historical performance statistics published by L2 Signals must be interpreted in the context in which they were measured.

Backtested results must not be interpreted as verified live trading results. Forward-tested results must not automatically be treated as live-account results.

L2 Signals will identify the nature of published performance figures as accurately as reasonably possible. Subscribers should assess results based on the stated methodology, sample size, measurement period, and applicable limitations.

04 No Guarantee of Signals or Profits

L2 Signals operates according to defined strategy conditions and filtering rules.

A valid trading opportunity may not occur on a particular day, week, or other period. The signal engine is not required to generate a signal simply because subscribers expect trading activity.

There may be periods with:

- No new signals.
- Consecutive losing signals.
- Lower-than-expected win rates.
- Reduced strategy performance.
- Market conditions that produce fewer qualifying setups.

L2 Signals does not guarantee a minimum number of signals, a specific win rate, a minimum monthly return, a particular profit factor, or a positive monthly result unless a specific commitment is expressly stated in the applicable service terms.

Subscribers should not interpret a quiet period as a reason to force additional trades outside the published system.

05 Individual Execution Results May Differ

The official performance of L2 Signals is measured using the signal engine and the methodology established in the Performance Measurement Policy.

A subscriber’s personal trading results may differ from the official performance for reasons including:

- Executing a signal after the intended entry price has moved.
- Using a different entry price or order type.
- Failing to obtain a pending-order fill.
- Experiencing slippage or a wider spread.
- Using a different broker, account type, or contract specification.
- Changing position size.
- Moving, removing, or widening a stop-loss.
- Changing a take-profit level.

- Delaying execution or ignoring a signal update or cancellation.
- Closing a trade manually before the system’s stated exit condition.
- Applying different commissions, swaps, or other trading costs.

Subscribers are responsible for their own trade execution and account management.

Personal execution differences do not automatically change the official outcome recorded for an L2 Signals setup. The official performance record and the result achieved in an individual subscriber’s account are separate measurements.

This distinction does not excuse an error in L2 Signals’ own published records or a material misrepresentation of its service.

06 Position Sizing and Risk Management

L2 Signals recommends that subscribers risk no more than 2% of their account balance on any single signal.

This is a maximum permitted risk guideline within the L2 Signals execution rules, not a recommendation that every subscriber should routinely risk 2%. A lower risk level may be more appropriate depending on individual circumstances and account restrictions.

Position sizing must account for:

- Account balance and available equity.
- Entry price and stop-loss distance.
- Instrument specifications and contract size.
- Broker minimum and maximum lot sizes.
- Leverage and margin requirements.
- Commission, spread, and other execution costs.
- Applicable daily loss limits and drawdown restrictions.

A lot-size recommendation shown on a signal card is not guaranteed to be appropriate for every account or broker. Subscribers must independently verify the actual monetary risk before entering a trade.

If the smallest permitted position would exceed the subscriber’s risk limit, the subscriber should skip the trade.

Subscribers must not remove or widen a stop-loss merely to avoid realising a loss.

Risk limits can reduce exposure but cannot eliminate the possibility of losses exceeding the intended amount under all market and execution conditions.

07 Leverage and Margin Risk

Leveraged trading allows a relatively small amount of capital to control a larger market position. This can amplify both gains and losses.

Adverse price movements may reduce account equity quickly and may lead to margin calls, forced liquidation, or losses greater than initially expected, depending on the instrument, broker, and applicable protections.

Subscribers are responsible for understanding their broker's leverage, margin requirements, liquidation rules, and negative-balance protection arrangements, if any.

Do not assume that a recommended lot size or stop-loss distance is suitable for every leveraged account.

08 Broker and Execution Risks

L2 Signals does not control the trading conditions or execution systems of a subscriber's broker.

Actual execution may be affected by:

- Bid/ask spreads and spread widening.
- Slippage and price gaps.
- Delayed order processing.
- Rejected, partially filled, or unfilled orders.
- Temporary platform outages.
- Differences in instrument pricing and contract specifications.
- Commission, financing, or swap charges.
- Broker-specific restrictions and trading conditions.

A signal may be valid under the signal engine's stated methodology while a subscriber experiences a different result because of broker-side conditions.

Subscribers should understand how their chosen broker handles the relevant instrument and should not assume that the signal's displayed prices will always be available in their own account.

09 Economic News and Unusual Market Conditions

Economic announcements, central-bank decisions, geopolitical developments, unexpected events, and other market-moving information may cause sharp or irregular price movements.

During such periods, spreads may widen, execution may deteriorate, and stop-loss orders may be filled at prices different from those expected.

Subscribers must follow any published signal restrictions, cancellations, expiry instructions, and applicable broker or proprietary trading firm news rules.

Where a signal is cancelled or an instruction changes, subscribers are responsible for following the latest official update.

Subscribers using proprietary trading firm accounts must independently confirm that each trade complies with the firm's restrictions, including news-trading rules, daily loss limits, maximum drawdown limits, and other account conditions.

L2 Signals does not guarantee that a signal will comply with every proprietary trading firm's individual rules.

10 Account Size Guidance

L2 Signals provides the following general account-size guidance:

- **Above $1,000:** Recommended for more comfortable execution, particularly on proprietary trading firm accounts.
- **$500–$1,000:** Supported where the subscriber can follow the prescribed position-sizing rules without exceeding their risk limit.
- **Below $500:** A cent account that supports smaller position sizes may be worth considering.

These figures are guidance, not guarantees of suitability, profitability, or protection against loss.

The appropriate account size depends on the instrument traded, broker specifications, stop-loss distance, minimum lot size, leverage, and the subscriber's financial circumstances.

A larger account does not guarantee profits, and a smaller account does not make a trade safe simply because the monetary position is smaller.

11 Signal Expiry and Instruction Changes

Subscribers must follow the order type and trading instructions published for each signal.

Under the current Signal Access & Delivery Policy, the daily expiry window is 21:00–21:50 UTC, subject to any more specific expiry stated on the individual signal card.

Subscribers must close open L2 Signals trades and cancel relevant pending orders by the applicable expiry. Expired signals must not be carried into the next trading day unless an official policy or signal instruction expressly provides otherwise.

Subscribers are responsible for monitoring official updates, including changes to entries, cancellations, and other execution instructions.

Failure to follow these instructions may produce results that differ from the official signal outcome.

12 Technology, Data, and Service Availability

Signal generation and delivery may depend on market-data feeds, trading platforms, servers, internet connectivity, software components, and communication services.

These systems may experience delays, interruptions, inaccurate data, outages, or technical failures.

Such events may affect the timing, availability, or accuracy of a signal or its delivery. L2 Signals will make reasonable efforts to address identified service issues, but uninterrupted availability cannot be guaranteed.

Subscribers should not assume that a signal has been delivered, updated, or cancelled unless they have access to the relevant official communication.

Where a material error or interruption is identified, L2 Signals may correct a published record, issue a clarification, suspend signal delivery, or take other reasonable steps appropriate to the circumstances.

13 Official Performance and Monthly Measurement

L2 Signals calculates its official performance using the signal engine and the rules in its Performance Measurement Policy.

Official monthly net R is measured by calendar month using the stated methodology. Signals that remain open at the monthly cutoff are tracked until their outcomes are finalised, in accordance with that policy.

Official performance is not a promise that every subscriber will achieve the same return.

Individual results may differ because of execution, broker conditions, position sizing, trading costs, discretionary decisions, or failure to follow instructions.

Subscribers should review the methodology accompanying published performance figures and should not rely on a single statistic, a short performance period, or a limited number of trades as proof of future profitability.

14 Founding Member Extension Is Not a Cash Refund

Eligible founding members may qualify for one additional month of signal-group access after their first paid subscription month when the applicable official net R is zero or negative, subject to the Founding Member Extension Policy and Performance Measurement Policy.

This benefit:

- Is an extension of service access, not a cash refund.
- Is assessed using official L2 Signals performance rather than an individual subscriber’s personal account results.
- Applies only once and only under the stated eligibility conditions.
- Does not reimburse personal trading losses, broker charges, commissions, or other expenses.
- Does not guarantee that a subsequent month will be profitable.

The extension is a defined membership benefit. It is not a guarantee of trading performance or a substitute for the subscriber’s own risk management.

15 No Personalised Financial Advice

L2 Signals provides systematic trading signals and related service information. Its signals are not a personalised assessment of a subscriber’s financial position, objectives, experience, or risk tolerance.

Subscribers are responsible for deciding whether to trade, whether the service is appropriate for them, and whether they can tolerate the associated risks.

Nothing in this disclosure should be interpreted as a guarantee of profit or as a substitute for obtaining independent professional advice where appropriate.

The legal and regulatory classification of the service depends on the applicable law and the actual activities carried out. This disclosure does not itself determine or guarantee the regulatory status of L2 Signals.

16 Subscriber Responsibility

By using L2 Signals, subscribers acknowledge that they are responsible for:

1. Understanding the risks of the relevant financial instruments.
2. Reviewing the published signal and its instructions before execution.
3. Verifying position size and monetary risk.
4. Maintaining compliance with broker and proprietary trading firm rules.
5. Monitoring open trades and applicable expiry times.
6. Following official signal updates and cancellations.
7. Maintaining their own records of orders, fills, and account results.
8. Deciding whether to execute, skip, or stop trading a signal.
9. Trading only with capital they can afford to lose.
10. Seeking independent professional advice where necessary.

Subscribers must not trade solely because they expect L2 Signals to produce a particular profit or monthly result.

17 Acknowledgement of Risk

By subscribing to or using L2 Signals, you acknowledge that:

- Trading involves a real possibility of financial loss.
- Historical performance does not guarantee future results.
- Signals may lose, and there may be extended periods without profitable outcomes or without any signals.
- Your personal results may differ from official signal performance.
- Risk-management measures cannot eliminate all trading risk.
- You are responsible for your own execution and account management.
- The founding member extension, where applicable, is a service-access benefit and not a cash reimbursement of trading losses.
- You have had the opportunity to review this disclosure and the other applicable L2 Signals policies.

If you do not understand these risks or cannot tolerate the possibility of losing the capital you trade, you should not execute the signals.

Document status: Draft for review before launch.

This disclosure should be reviewed alongside the L2 Signals Subscription Terms & Conditions and other service policies. Its wording does not replace compliance with applicable laws or guarantee that every possible dispute or liability is excluded.

L2 SIGNALS — Systematic Trading. Measured Performance. Structured Execution.
